

Install Julia

And Anaconda

Open Julia, install all necessary packages:

- `using Pkg`
- `Pkg.add(["IJulia","MixedModels","RCall","DataFrames", "CSV","RData", "Statistics","Dates"])`

Open the Jupyter notebook REPL file:

- `using IJulia`
- `notebook(detached=true)`

When prompted to install Jupyter via Conda, enter "y" to install Jupyter.

- `y`

Navigate to the location of the file downloaded from GitHub (often Documents > GitHub > Power-Analyse-Psychophysics) and open it. Then you can adjust the parameters and run the script.
